

- Each record has three fields:
 - char name [16]
 - int age
 - enum {female, male} sex
- The input is like "Peter Wang", 35, female
- Each line of the input is a record to be inserted
- Output:
 - After insertion
insert record, name=XXX,age=NN,sex=male;
 - When insertion-to-full: output message "queue/stack full, allocate double size NN"

Input:

"Peter Wang", 35, female

Output:

name="Peter Wang",age=35,sex= female
